

QuickEstimate Enterprise Information

Generated on May 18, 2026

QuickEstimate is a cloud-based construction and contractor estimation platform designed to help businesses create accurate, margin-protected estimates quickly and professionally. The platform focuses on reducing underpricing, automating overhead calculations, improving proposal workflows, and helping contractors maintain profitability.

Company Overview

QuickEstimate is built primarily for contractors, construction firms, agencies, and service businesses that need structured estimating workflows. The software replaces spreadsheets and manual calculations with an organized system that standardizes materials, labor, subcontractor costs, equipment expenses, overhead, and profit margins.

Core Features

- Materials, labor, equipment, and subcontractor costing
- Automatic company overhead calculation
- Real-time profit margin visibility
- Professional branded PDF proposal generation
- Client approval tracking and revision management
- Estimate history and project tracking
- Multi-user collaboration and analytics for teams

Business Value

The platform helps contractors avoid hidden financial losses caused by underpricing, missing overhead, labor miscalculations, and inconsistent estimating practices. QuickEstimate emphasizes profit protection through structured workflows and automated calculations.

Security & Infrastructure

QuickEstimate states that it uses AES-256 encryption for data protection and is hosted on SOC 2 Type II certified infrastructure. The system is designed to keep estimate data, pricing, and client information secure and private.

Target Users

The platform is suitable for:

- Solo contractors
- General contractors
- Residential remodelers
- Commercial construction firms
- HVAC, electrical, and plumbing businesses
- Multi-project estimating teams

Pricing Overview

Basic Plan: \$29/month — up to 10 estimates/month

Gold Plan: \$79/month — unlimited estimates with workflow tools

Premium Plan: \$149/month — team collaboration, analytics, and API access

Workflow Summary

1. Create a project
2. Add materials and labor costs
3. Configure overhead and margin targets
4. Generate professional proposals
5. Send proposals to clients
6. Track approvals and revisions
